PROBLEM

- API DOCS ARE HARD TO READ
- API DOCS ARE LONG

```
{  
  "info": {  
    "_postman_id": "84d01ff8-4253-4720-b454-af661f36acc2",  
    "name": "WhatsApp Cloud API",  
    "description": "[WhatsApp Cloud API](https://developers.facebook.com/docs/cloud-api), hosted by Meta, is the official WhatsApp Business Platform for business messaging. This collection contains common queries, sample requests, and links to supporting documentation that can help you quickly get started with the API.\n\n## Requirements\n\nTo use the API and this collection you must have a valid business portfolio, a WhatsApp Business Account, and a business app. To complete the steps in the Cloud API [Get Started](https://developers.facebook.com/docs/whatsapp/cloud-api/get-started) guide, these assets will be required:\n\n## Environment\n\nThis collection has a corresponding WhatsApp Cloud API [environment](https://learning.postman.com/docs/sending-requests/environments/managing-environments/) which you must select when using the collection. **current values** for the variables defined in this environment will be used in the collection to perform queries.\n\nYou can find most of these assets in the [WhatsApp Manager](https://business.facebook.com/wa/manage/home/) app dashboard (**WhatsApp** > **Getting Started** panel in the [app dashboard](https://business.facebook.com/apps)). However, if you have an access token and your app ID, you can use queries in the collection to get the remaining variables.\n\nThe API supports both user and system user access tokens. To get a user access token by loading your app in the [app dashboard](https://business.facebook.com/apps) and navigating to the WhatsApp > Getting Started panel. Alternatively you can use the [Graph API Explorer](https://developers.facebook.com/tools/explorer/) to generate one.\n\nSince user access tokens expire, you'll likely want to generate a system user access token, which is permanent (or permanently, if you wish). See [Access Tokens](https://developers.facebook.com/docs/cloud-api/access-tokens).
```

SOLUTION

- CONVERT **DOCS** TO **USER STORIES**
 - THEN CONVERT **USER STORIES** TO **USER INTERFACES**
-
